ACTA ASTRONAUTICA

Journal of the International Academy of Astronautics

Vol. 30 **1993**

CONTENTS

Preface

Rodolfo Monti ix

I. THE STRATEGIES

I.1. International Space Plans and Policies

Problems and opportunities in achieving a common international stretegy to explore the Moon and Mars

Richard J. H. Barnes 1

An international program to protect the Earth from impact catastrophe: initial steps

David Morrison 11

I.2. Management

Some thoughts on the management of large, complex international space ventures

T. J. Lee, Ants Kutzer and W. C. Schneider 17

ESA's experience with managing joint international projects

Gordon R. Bolton, Dieter von Eckardstein and Rudy C. Meiner 21

II. TECHNOLOGIES AND SYSTEMS

II.1. Materials and Structures

In-step inflatable antenna experiment

R. E. Freeland and G. Bilyeu 29

The challenge of adaptive structures

E. J. Breitbach and R. Wimmel 41

The influence of commonly used materials and compounds on spacecraft contamination

Diane J. Martin and Carl R. Maag 51

II.2. Safety and Rescue

A safety and reliability analysis for space nuclear thermal propulsion systems

Pasquale M. Sforza, Martin L. Shooman and Dennis G. Pelaccio 67

International spaceflight crew rescue standards

L. Tedeman and K. Wright 85

PERGAMON PRESS

Oxford · New York · Seoul · Tokyo

INDEXED IN Appl. Mech. Rev., Res. Alert, Biosis Data., Cam. Sci. Abstr., Chem. Abstr. Serv., Curr. Cont./Eng. Tech. & Appl. Sci., Eng. Indx, INSPEC Data., PASCAL-CNRS Data., Curr. Cont. SCISEARCH Data., Murdoch Magazine

ISSN 0094-5765

AASTCF 30 1–466 (1993)

Space and disaster warning in developing countries
Carlos Rosado Rodriguez and U. R. Rao 93

II.3. Space Power
Implications for the technology of high voltage solar arrays: the possibility of an arc resistant cell
Daniel E. Hastings, Mengu Cho and Renee Mong 115

Photovoltaic arrays for Martian surface power
Joseph Appelbaum and Geoffrey A. Landis 127

Nuclear propulsion for space exploration
Thomas J. Miller and Gary L. Bennett 143

II.4. Space Propulsion
Development of arcjet and ion propulsion for spacecraft stationkeeping
James S. Sovey, Francis M. Curran, Thomas W. Haag, Michael J. Patterson, Eric J. Pencil, Vincent K. Rawlin and John M. Sankovic 151

Solid rocket motor space launch vehicles
A. J. MacLaren and H. D. Trudeau 165

II.5. Space System
New lunar eyes: sensing the Moon in the 90s
Frank J. Redd and James D. Burke 173

II.6. Space Transportation
The small launcher issue, revisited
J. H. Lacaze and H. Tran-Thuan 179

The Ariane transfer vehicle and its potential role in space station construction and logistics
A. J. Thirkettle, P. Puech, R. Ress, D. Salt and F. Theillier 185

Near-term SEI science missions utilizing an evolutionary lunar transportation system
Charles L. Johnson and Norman S. Brown 199

Space transportation for the twenty-first century
J. R. Gavin Jr, A. C. Sandlin and J. Clayton 209

Hermes X-2000 mission analysis
B. Belon, F. Alby and J. Colrat 219

III. THE EXPLOITATION

III.1. Satellite Communications
The communications payload of the MSAT spacecraft
R. Belanger, H. J. Moody, S. Hatzigeorgiou, G. Turgeon and G. Voulelikas 229

A LEO–MSS system for position reporting and data messaging services
A. Gautier and P. Dumont 239

Study of microsat communication system
K. Kondo, Y. Hashimoto, R. Suzuki, M. Tanaka, T. Ikegami, T. Obuchi, O. Nakagawa and M. Matsui 247

Progress in implementation of the proposals of the Satellite Green Paper in the European Community
Paul Verhoef 253

III.2. Space Exploration
Two years of successful operations of the coded-mask telescope SIGMA for hard X-ray and soft γ-ray astronomy
Jacques Paul, François Lebrun, Pierre Mandrou and Jean-Pierre Roques 261

Mission operations technology
Giulio Varsi 271

Communications support for lunar missions using the TDRS II system
Jacqueline Todd, Donald J. Hei Jr, William S. Guion and Phillip Shapiro 279

Exploration of Pluto
Robert L. Staehle, Douglas S. Abraham, John B. Caraway, Paul J. Esposito, Christopher G. Salvo, Richard J. Terrile, Richard A. Wallace, Stacy S. Weinstein and Elaine Hansen 289

Galileo completing VEEGA—a mid-term report
William J. O'Neil, Neal E. Ausman Jr, Torrence V. Johnson and Matthew R. Landano 311

III.3. Space Station
Space Station Freedom: approaching the critical design phase
Richard Kohrs and Earle Huckins III 331

Columbus Attached Pressurized Module verification approach
Luigi d'Emiliano, Massimo Braghin and Günther Brandt 335

Technology planning for long range utilization of Space Station Freedom
P. Ahlf and J. Volosin 345

III.4. Microgravity Science and Progress
Thermal stability during rotation in space: a scaling and numerical analysis
William A. Arnold, Liya L. Regel and William R. Wilcox 357

The functional model of the bubble drop and particle unit: a new approach to the concept of the experiment ground support equipment
C. Mirra, R. Fortezza, L. D'Angelo, P. G. Rabino, P. G. Falciani, M. Tacconi, S. Musazzi, U. Perini, F. Trespidi and P. Tua 369

IV. HISTORY AND SOCIETY

IV.1. Space Activities and Society
Spaceflight & the cinema
Ron Miller 385

Progress in the IDNDR
Filippo Alessi 391

IV.2. Space and Education
Space and education in developing countries
Fuwen Gao and U. R. Rao 397

V. ECONOMICS IN SPACE

V.1. Economics in Space Operations
Cost analysis of single-stage (SSTO) reusable ballistic launch vehicles
D. E. Koelle 415

V.2. Scientific Legal Round Table
Legal implications of the exploration & uses of the Moon & other celestial bodies
N. M. Matte 423

VI. STUDENT CONFERENCE

The structural characteristics of inflatable beams
William J. Wicker 443

Formulation of a ΔV minimization problem in heliocentric space incorporating finite powered-flight times
Scott E. Sherer 455
